NCSA Mosaaic Neumayer Antarctic Research Station	File Edit Options Navigate Annotate Starting Points Bookmark —	JRL http://www.awi-Bremerhaven	Neumayer Antartic Research Station	The first German Antarctic station "Georg von Neumayer" (7°37'S, 8°22'W) was built in 1981 on the Ekstroem Ice Shelf to serve as scientific observatory for <u>geophysical, meterorological,</u> and <u>air chemistry</u> measurements, as well as a logistical base for summer expeditions.	The new Neumayer Station(70°39'S, 8°45'W), completed in March 1992, continues these activities. The measurement programme is expanded steadidy and now includes monitoring of the <u>vertical ozone distribution.</u> Neumayer Station consists of two parallel steel tubes, each 90 meters long and 8 meters in diameter, in which containers are inserted to accomodate living quarters, pantry, kitchen, hospital, laboratories, workshop radio operator's room, sanitation, two energy supply stations, and a snow melting plant.
